

Criteria: Exploratory Data Analysis-

Problem definition, questions to be answered

Data background and contents

Univariate analysis - Bivariate analysis

Answers to the key questions provided - Insights based on EDA

Criteria: Data preprocessing

Duplicate value check

Missing value treatment

Outlier treatment

Feature engineering

Data preparation for modeling

Criteria: Model building - Linear Regression

Build the model and comment on the model statistics

Display model coefficients with column names

Criteria: Model building - Linear Regression

Build the model and comment on the model statistics

Display model coefficients with column names

Criteria: Testing the assumptions of linear regression model

Perform tests for the assumptions of the linear regression

Comment on the findings from the tests

Criteria: Model performance evaluation

Evaluate the model on different performance metrics

Criteria: Actionable Insights & Recommendations

Comments on significance of predictors

Key takeaways for the business

Criteria:

Quality of Business Report
